

MCI Project Weekly Time Sheet

Team

5 Student ID a1820200

Week starting: week 7

Day	Date	Time In	Time Out	Total hours	Task	How does it fit to project plan?	Outcome/Next action
Monday	25th April	1:30 PM	2:30 PM	1	Group meeting, update the work that have been done during the break, what should we do in this week. Discuss what can be improved for the current version.	By the time as we planned we should finished course relationship function. However, we only finished the back end and frontend separately, we still need one more week to connect our front and back end.	Tasks allocation on github project, group meeting minutes
Monday	25th April	2:30 PM	3:00 PM	0.5	Write the meeting minutes, update the task break down on github project.	Assign the task to meet this week's goal, which is optimising course relationship function.	Execute the task
Wednesday	27th April	11:00 AM	12:00 PM	1	Zoom meeting with Yen You Chew, explains front end code, describe the effect of how front end should react with back end api.	Help to build the connection between front and back end	Next step: the outcome will be demonstrated on the Sunday group meeting.
Friday	29th April	6:30 PM	9:00 PM	2.5	Research & watching tutorial on react bootstrap.	The task of this week is to reconstruct the front end of searching page because the version at the moment is not suitable for all the screen size. There are two way of doing it, the first one is by adjusting the parameter; the second way is by using bootstrap frame. Since I am not familiar with the second method, so that I can not decide which method is the best suit for current condition. So I need to get myself familiar with react bootstrap.	As I did the research, I think it is not necessary to use the bootstrap. I decided to go with the adjust parameter method.
Saturday	30th April	12:30 PM	4:00 PM	4	Fixing a bug which I can not connect to the server. (I tried the version that I committed during midbreak, I am pretty sure there was not the problem back in that time, however I got this bug from nowhere after I came back from the break)	I need to connect to your server to make changes to the front end page.	I fixed it by using a solution online. Next step is adjusting the front end of course relationship search page.
Saturday	30th April	4:00 PM	8:00 PM	4	Adjusting the parameters of course relationship search page.	Task of the week	Next step, I want to develop an effect for our header, which it will emphasise the name of page in header of the current page.
Saturday	30th April	8:30 PM	3:30 AM	7	Fix the bug that I thought I solve earlier today. I logged out my user name in the front end, when I try to login, it appears to me I did not connect with the back end. The solution on the internet only solved the problem for connecting the front end, my problem is that I still can not connect to the back end. I ask Yan You Chew to try the same code that I run on my computer, the code works fine in his computer, but mine does not work. I thought I might be the version of npm, so I tried several different version, but it still can not help.	I need to connect the front and back end correctly to do the further development.	I still not solve the bug, more time is needed.
Sunday	1st May	9:30 AM	10:00 AM	0.5	Stand-up meeting with the team, update the progress of the project.	To see how well we perform with the task.	Meeting with our client to demonstrate our progress.
Sunday	1st May	10:00 PM	1:30 AM	3.5	keep solving the bug that I mentioned previously	I need to connect the front and back end correctly to do the further development.	I think I got something, but I need to have a meeting with Yan You Chew who is responsible for connecting front and back end.
